Undergraduate Algebra

Third edition – Springer, 2004

Serge Lang

March 10, 2026

Contents

1 The Integers **1**
- 1.1 Terminology of Sets . . . 1
- 1.2 Basic Properties . . . 1
- 1.3 Greatest Common Divisor . . . 1
- 1.4 Unique Factorization . . . 1
- 1.5 Equivalence Relations and Congruences . . . 1

2 Groups **3**
- 2.1 Groups and Examples . . . 4
- 2.2 Mappings . . . 4
- 2.3 Homomorphisms . . . 4
- 2.4 Cosets and Normal Subgroups . . . 4
- 2.5 Application to Cyclic Groups . . . 4
- 2.6 Permutation Groups . . . 4
- 2.7 Finite Abelian Groups . . . 4
- 2.8 Operation of a Group on a Set . . . 4
- 2.9 Sylow Subgroups . . . 4

3 Rings **5**
- 3.1 Rings . . . 5
- 3.2 Ideals . . . 5
- 3.3 Homomorphisms . . . 5
- 3.4 Quotient Fields . . . 5

4 Polynomials **7**
- 4.1 Polynomials and Polynomial Functions . . . 8
- 4.2 Greatest Common Divisor . . . 8
- 4.3 Unique Factorization . . . 8
- 4.4 Partial Fractions . . . 8
- 4.5 Polynomials over Rings and Over the Integers . . . 8
- 4.6 Principal Rings and Factorial Rings . . . 8
- 4.7 Polynomials in Several Variables . . . 8
- 4.8 Symmetric Polynomials . . . 8

4.9 The Mason/Stothers Theorem 8
4.10 The *abc* Conjecture 8

5 **9**
5.1 Vector Spaces and Bases 9
5.2 Dimension of a Vector Space 9
5.3 Matrices and Linear Maps 9
5.4 Modules 9
5.5 Factor Modules 9
5.6 Free Abelian Groups 9
5.7 Modules over Principal Rings 9
5.8 Eigenvectors and Eigenvalues 9
5.9 Polynomials of Matrices and Linear Maps 9

6 **11**
6.1 The General Linear Group 11
6.2 Structure of $GL_2(F)$ 11
6.3 $SL_2(F)$ 11
6.4 $SL_n(\mathbb{R})$ and $SL_n(\mathbb{C})$ 11
6.5 Other Decompositions 11
6.6 The Conjugation Action 11

7 Field Theory **13**
7.1 Algebraic Extensions 13
7.2 Embeddings 13
7.3 Splitting Fields 13
7.4 Galois Theory 13
7.5 Quadratic and Cubic Extensions 13
7.6 Solvability by Radicals 13
7.7 Infinite Extensions 13

8 Finite Fields **15**
8.1 General Structure 15
8.2 The Frobenius Automorphism 15
8.3 The Primitive Elements 15
8.4 Splitting Field and Algebraic Closure 15
8.5 Irreducibility of Cyclotomic Polynomials over Q 15
8.6 Where Does It All Go? Rather, Where Does Some of It Go? . 15

10 Sets **17**
10.1 More Terminology 17
10.2 Zorn's Lemma 17
10.3 Cardinal Numbers 17
10.4 Well-ordering 17

A Appendix **19**
A.1 The Natural Numbers 19
A.2 The Integers 19
A.3 Infiinite Sets 19

Chapter 1

The Integers

1.1 Terminology of Sets

1.2 Basic Properties

1.2.1 Exercises

1.3 Greatest Common Divisor

1.4 Unique Factorization

1.4.1 Exercises

1.5 Equivalence Relations and Congruences

1.5.1 Exercises

Chapter 2

Groups

2.1 Groups and Examples

2.1.1 Exercises

2.2 Mappings

2.2.1 Exercises

2.3 Homomorphisms

2.3.1 Exercises

2.4 Cosets and Normal Subgroups

2.4.1 Exercises

2.5 Application to Cyclic Groups

2.5.1 Exercises

2.6 Permutation Groups

2.6.1 Exercises

2.7 Finite Abelian Groups

2.7.1 Exercises

2.8 Operation of a Group on a Set

2.8.1 Exercises

2.9 Sylow Subgroups

2.9.1 Exercises

Chapter 3

Rings

3.1 Rings

3.1.1 Exercises

3.2 Ideals

3.2.1 Exercises

3.3 Homomorphisms

3.3.1 Exercises

3.4 Quotient Fields

3.4.1 Exercises

Chapter 4

Polynomials

4.1 Polynomials and Polynomial Functions

4.1.1 Exercises

4.2 Greatest Common Divisor

4.2.1 Exercises

4.3 Unique Factorization

4.3.1 Exercises

4.4 Partial Fractions

4.4.1 Exercises

4.5 Polynomials over Rings and Over the Integers

4.5.1 Exercises

4.6 Principal Rings and Factorial Rings

4.6.1 Exercises

4.7 Polynomials in Several Variables

4.7.1 Exercises

4.8 Symmetric Polynomials

4.8.1 Exercises

4.9 The Mason/Stothers Theorem

4.9.1 Exercises

4.10 The *abc* Conjecture

4.10.1 Exercises

Chapter 5

5.1 Vector Spaces and Bases

5.1.1 Exercises

5.2 Dimension of a Vector Space

5.2.1 Exercises

5.3 Matrices and Linear Maps

5.3.1 Exercises

5.4 Modules

5.4.1 Exercises

5.5 Factor Modules

5.5.1 Exercises

5.6 Free Abelian Groups

5.6.1 Exercises

5.7 Modules over Principal Rings

5.7.1 Exercises

5.8 Eigenvectors and Eigenvalues

5.8.1 Exercises

5.9 Polynomials of Matrices and Linear Maps

5.9.1 Exercises

Chapter 6

6.1 The General Linear Group

6.1.1 Exercises

6.2 Structure of $GL_2(F)$

6.2.1 Exercises

6.3 $SL_2(F)$

6.3.1 Exercises

6.4 $SL_n(\mathbb{R})$ and $SL_n(\mathbb{C})$

6.4.1 Exercises

6.5 Other Decompositions

6.5.1 Exercises

6.6 The Conjugation Action

6.6.1 Exercises

Chapter 7

Field Theory

7.1 Algebraic Extensions

7.1.1 Exercises

7.2 Embeddings

7.2.1 Exercises

7.3 Splitting Fields

7.3.1 Exercises

7.4 Galois Theory

7.4.1 Exercises

7.5 Quadratic and Cubic Extensions

7.5.1 Exercises

7.6 Solvability by Radicals

7.6.1 Exercises

7.7 Infinite Extensions

7.7.1 Exercises

Chapter 8

Finite Fields

8.1 General Structure

8.1.1 Exercises

8.2 The Frobenius Automorphism

8.2.1 Exercises

8.3 The Primitive Elements

8.3.1 Exercises

8.4 Splitting Field and Algebraic Closure

8.4.1 Exercises

8.5 Irreducibility of Cyclotomic Polynomials over Q

8.5.1 Exercises

8.6 Where Does It All Go? Rather, Where Does Some of It Go?

8.6.1 Exercises

Chapter 10

Sets

10.1 More Terminology

10.1.1 Exercises

10.2 Zorn's Lemma

10.2.1 Exercises

10.3 Cardinal Numbers

10.3.1 Exercises

10.4 Well-ordering

10.4.1 Exercises

Chapter A

Appendix

A.1 The Natural Numbers

A.2 The Integers

A.3 Infiinite Sets
